Figure A shows the percentage of mice with proteinuria over time, with data points for different genotypes: $Sn^{+/+}$ (black circles), $Sn^{-/-}$ (white circles), and $Sn^{+/+}$ (empty circles).

Figure B displays the OD 405 values for IgM and IgG over weeks, with data points for the same genotypes.

Figure C compares the scores for Glomerular, Tubular, and Perivascular damage between $Sn^{+/+}$ (black bars) and $Sn^{-/-}$ (white bars), along with the percentage tubular damage.
