A. Comparison of sCD18 concentration (mU/ml) between HLA-B27+ and HLA-B27- SpA and HC groups.

B. Scatter plot showing the relationship between BASDAI and sCD18 concentration (mU/ml) with a significant difference indicated by an asterisk (*).

C. Scatter plot showing the relationship between MMP-9 concentration (U/ml) and sCD18 concentration (mU/ml) with a significant positive correlation indicated by a line of best fit and an asterisk (*)..

The charts illustrate the differences in sCD18 concentrations between the SpA and HC groups, as well as the correlation between BASDAI and MMP-9 concentration with sCD18 concentration.
