Figure 7

The graph shows the mean tumor volume over time for two groups: Vehicle (square symbols) and ABL-N (diamond symbols). The x-axis represents the number of days, starting from 0 and extending up to 36 days. The y-axis represents the mean tumor volume in mm³, ranging from 0 to 2000. The graph includes error bars indicating variability. At day 0, the treatment started, as indicated by the arrow labeled "Treatment started." Statistically significant differences are marked with asterisks: * for a p-value less than 0.05, ** for a p-value less than 0.01, and *** for a p-value less than 0.001.
