A) Bar graph showing the number of CD31-positive blood vessels in different conditions: CTL, FLU, PD, and FLU + PD. The graph indicates a significant difference (*p < 0.03, N = 6).

B) Image of control CD31 (40X) at 40 µM.

C) Image of PD CD31 (40X).

D) Image of FLU + PD CD31 (40X).
