Figure A: Bar charts showing the distribution of non-pCR and pCR in CMTC-1, CMTC-2, and CMTC-3. The x-axis represents the CMTC samples, and the y-axis represents the percentage of non-pCR and pCR.

Figure B: ROC curves comparing CMTC-3 to the other CMTC samples. The curves are labeled with the corresponding AUC values. The x-axis represents the 100-specificity, and the y-axis represents the sensitivity.

Figure C: Scatter plot showing the correlation coefficient to CMTC-3 for Her2+/TN cancers (n=111). The graph indicates that r > 0 is associated with pCR = 45.3% and r < 0 is associated with pCR = 4.3%.

Figure D: Scatter plot showing the correlation coefficient to CMTC-3 for all cancers (n=248). The graph indicates that r > 0 is associated with pCR = 37.3% and r < 0 is associated with pCR = 3.9%.
