Figure A shows images of cell cultures over 24 hours with different treatments: media alone, HMF conditioned media, media + Act (0.08 μg/ml), and HMF + Act (0.08 μg/ml) conditioned media. The images are labeled with Time Since Scratch (hrs) and show the progression of cell movement over time.

Figure B illustrates the percentage wound open over time for each treatment. The graph includes lines for media, HMF conditioned media, media + Act (0.08 μg/ml), and HMF + Act (0.08 μg/ml) conditioned media, indicating the rate of wound closure for each condition.
