Figure 2.

**Insulin Sensitising Properties**

- TNF-α
- IL-6
- IL-10

**ADIPONECTIN**

- Suppression of macrophage functioning
- Reactive oxygen species
- Leukocyte elastase

**Endothelial Cells**

- Preservation of endothelial cell function

**Inflammatory Cells**

- Macrophages
- Neutrophils
- NK Lymphocytes

**Leukocyte elastase**

- Globular adiponectin (the significance of this is unknown)

- Both activation and inhibition of NF-κB have been observed

- Inhibition of NK lymphocyte function via NF-κB pathways
