**A**

Comparison of suPAR levels between controls and patients. The difference is statistically significant with a p-value of <0.001.

- **Controls (n=43)**: suPAR levels are lower.
- **Patients (n=273)**: suPAR levels are higher.

**B**

Comparison of suPAR levels in patients with no SIRS, SIRS, and sepsis.

- **No SIRS (n=40)**: suPAR levels are lower.
- **SIRS (n=36)**: suPAR levels are medium.
- **Sepsis (n=197)**: suPAR levels are higher.

The differences are statistically significant with p-values of 0.006 and 0.008, respectively.

**C**

Comparison of suPAR levels in patients with different diagnoses at admission.

- **Pulmonary sepsis**
- **Non-pulmonary sepsis**
- **Liver cirrhosis**
- **Other diagnoses**

The differences are statistically significant with p-values of 0.018 and <0.001, respectively.
