(a) IL-8

(b) IL-10

(c) GM-CSF

---

**Note**: The diagrams show the concentration of IL-8, IL-10, and GM-CSF in pg/ml for different genotypes: non-carrier, TLR4 SNP, and TLR2 SNP. The data points are labeled with statistical symbols: * indicates a significant difference compared to the non-carrier group, † indicates a significant difference compared to TLR4 SNP, and ‡ indicates a significant difference compared to TLR2 SNP.
