Full-term neonates 0 – 28 days treated with ECMO
January 1992 – January 2006:
\[ n = 282 \]

Neonates excluded:
- Routine continuous hemofiltration \( n = 35 \)
- Inadequate clinical data \( n = 3 \)
- Congenital renal anomalies \( n = 2 \)

Neonates included:
\[ n = 242 \]

Survivors
\[ n = 179 \]
- Non-AKI \( n = 69 \)
- Risk \( n = 59 \)
- Injury \( n = 42 \)
- Failure \( n = 9 \)

Non-survivors
\[ n = 63 \]
- Early Non-survivors: <24h post-ECMO
  \[ n = 30 \]
  - Non-AKI \( n = 9 \)
  - Risk \( n = 4 \)
  - Injury \( n = 8 \)
  - Failure \( n = 9 \)
- Late Non-survivors: >24h post-ECMO
  \[ n = 33 \]
  - Non-AKI \( n = 11 \)
  - Risk \( n = 9 \)
  - Injury \( n = 5 \)
  - Failure \( n = 8 \)
