Figure S8 Meta-analysis of the effect of PP on 90-day mortality in ARDS patients with P/F ≤ 300 mm Hg. Evidence showed obvious heterogeneity using the M-H chi-square test ($p = 0.001$) and the $I^2$ test ($I^2 = 81\%$). Random-effects model was performed. The z test for overall effects was not statistically significant ($p = 0.33$).

Weight is the contribution of each study to the overall RR. PP, prone positioning; SP, supine prone; ARDS, acute respiratory distress syndrome; P/F, partial pressure of arterial oxygen/inspired fraction of oxygen; M-H, Mantel-Haenzel; $I^2$, percentage of total variation across studies from between-study heterogeneity rather than chance; RR, risk ratio; CI, confidence interval.
