Figure 5

The figure shows a bar chart comparing the average JNK-positive cells per airway under different conditions. The x-axis represents control, WT, and JNK1 +/- conditions with Vt 30ml. The y-axis represents the average JNK-positive cells per airway.

- **Control** group shows a low average of JNK-positive cells.
- **WT** group shows a higher average compared to control.
- **JNK1 +/-** group shows a further increase in the average compared to WT.
