Supplementary Figure 3A

The graph shows a relationship between the median interacting partners per protein and the median disorder (%) across various tissues. The equation $y = 6.296x^{0.3514}$ is displayed on the graph.

Supplementary Figure 3B

The graph illustrates the total number of protein-protein interactions (STRING) against the total number of predicted binding sites. The equation $y = 74.46x^{0.5197}$ is shown on the graph.
