Figure A1. DNA tiling array genome coverage is dense and systematic. *P. falciparum* strain 3D7 chromosomes 2, 4, 7, and 9 are completely tiled. Chromosomes 3, 5, and 12 are partially tiled (*). Number of probes per 10000 bp is plotted versus chromosomal position. The median probe resolution is 12 bp, corresponding to approximately 830 probes per 10000 bp.
