Correlative TEM/NanoSIMS in the infected fragment fixed at 2.5 h.

Images taken in: (A) mesentary filament; (B) mesentary filament and oral epidermis; (C) oral epidermis and oral gastrodermis (D) oral gastrodermis. (L-R): TEM image is pictured alongside its corresponding $^{15}$N/$^{14}$N and $^{12}$C$^{14}$N$^{-}$ NanoSIMS images. The final column shows the TEM image overlaid with the $^{15}$N/$^{14}$N image.
