Distribution of the successive conclusions and misclassifications, obtained by applying the decision rule to the 5000 simulated trials at each interim analysis and in overall.

Class $a$ misclassifications: Trials that conclude that the difference between arms is *Unacceptable*, while it is not true; Class $b$ misclassifications: Trials that conclude that the difference between arms is *Acceptable*, while it is not true.
Class a misclassifications: Trials that conclude that the difference between arms is *Unacceptable*, while it is not true; Class b misclassifications: Trials that conclude that the difference between arms is *Acceptable*, while it is not true.
