INFORMATION TO THE PARTICIPANT

The project “Nutritional Strategies Facing an Older Demographic: The Nutrition UP 65 Study” is being conducted by the Faculty of Nutrition and Food Sciences of the University of Porto.

This study aims to improve knowledge regarding older Portuguese adults’ nutritional status, specifically about malnutrition, obesity, sarcopenia, fragility, vitamin D status, hydration and urinary sodium and potassium excretion. The main benefit of participating in this study is the possibility of finding out the test results regarding your nutritional status. Yours and other participants test results and will also allow the development of food and nutrition education programs adapted to this age-group.

We will ask you to answer questions whose content is important to the study. All procedures are simple and will be performed by professionals previously trained for this purpose.

Potential risks and discomforts relating to your participation are not anticipated, other than those associated with blood and urine sample collection, bodyweight, height, triceps skinfold, arm and leg circumferences measurements as well as with handgrip strength and gait speed assessment. There will be a questionnaire that will last about 20 minutes.

All of the information you provide to us is confidential and its privacy will always be guaranteed.

We inform that your participation in this study is voluntary and that you have the right to refuse to participate or to withdraw, without penalty or consequences of any kind.

Thank you in advance for your attention.

DECLARATION OF CONSENT

Considering the latest version of the "Declaration of Helsinki" of the World Medical Association

The Nutrition UP 65 Study | Nutritional Strategies Facing an Older Demographic

I, the undersigned,

______________________________________________________________

declare that I have understood the explanation given to me concerning the study that is intended to be carried out. I was given the opportunity to ask the questions that I thought necessary, and I got a satisfactory answer to all of them.

I have been informed that, according to the recommendations of the Helsinki Declaration, the information or explanation given to me has addressed the objectives, methods, expected benefits, potential risks and possible discomfort. In addition, I have been told that I have the right to refuse my participation in the study at any time, without penalty or consequences of any kind.

Therefore, I consent to the application of the procedures proposed by the investigator.
