If you need to limit potassium

**Potassium** is a mineral that helps keep your heart and muscles working properly.

**Why limit potassium?**

- heart attack
- muscle weakness
- irregular heartbeat

How much is okay to eat?

Your doctor recommends eating less than ______ mg per day.

---

### Read food labels

to find the best choice for your diet

### Use healthy tips

to shop, plan and prepare meals with less potassium

---

#### Serving size tells you what a single portion is.

#### Serving per container lists how many portions per container.

#### % Daily value is based on a 2,000 calorie daily diet. This number helps you know if a food is high or low in a nutrient, even if you eat more than 2,000 calories.

#### Potassium is not required to be listed by law. It is listed here, but it may not be listed even if the product contains potassium.

#### In general, % of potassium means:
- Low = Under 100 mg or less than 3%
- Medium = 101–200 mg or 3–6%
- High = 201–300 mg or 6–9%
- Very High = Over 300 mg or over 9%

#### Ingredients are listed in order by weight, with the item of the most weight listed first. If potassium chloride is in the ingredient list, it has a high potassium content.

---

#### At home:
- Don’t drink or use liquid from canned fruits, vegetables, or cooked meat.
- Eat a variety of foods, but in moderation.
- Serving size is very important. Almost all foods have some potassium. A large amount of a low-potassium food can turn into a high-potassium food.

#### At restaurants
- Choose restaurants best suited to your diet or where food is made to order. Call ahead and explain that you are following a special diet. Ask about the menu and how their food is prepared. Many restaurants have websites with menus posted.
- To have more choices when eating out, avoid higher-potassium fruits and vegetables during the day beforehand.
- Choose starches and vegetables that are lower in potassium (such as rice, noodles and green beans).
- Avoid french fries and other fried potatoes.
- For desserts:
  - Choose desserts with simple preparations to avoid “hidden” phosphorus and potassium.
  - Avoid desserts with chocolate, cream cheese, ice cream or nuts – they are high in potassium and phosphorus.

#### For Chinese food:
- Choose lower-potassium vegetables such as snow peas, string beans, water chestnuts, bean sprouts and bok choy.
- For Mexican food:
  - Be cautious – Mexican food may be high in potassium.
  - Beware of salsa. Salsa verde is a green sauce but is made of green tomatoes. Best choices: salsas made of chili peppers without tomatoes added.
  - Avoid beans and rice. Both are high in potassium.
  - Avoid guacamole. It is made from avocados, which are high in potassium.
- For Italian food:
  - Avoid tomato sauces. Tomatoes are high in potassium, but pasta is served with many sauces that are not tomato-based. If you must select a dish with tomato sauce, ask that it be served on the side.
- For Soul food:
  - Be cautious – it is often high in potassium.
  - Avoid black-eyed peas, dried beans, cooked greens, spinach, yams, and sweet potato pie. All are high in potassium.
  - Best choices? Fried chicken (no skin), corn, string beans or okra, wilted lettuce, corn bread or dinner rolls.
