Figure S1A. Median overall survival (OS; large dots) and interquartile range (smaller dots and shaded bars) by year of trastuzumab for MBC initiation for patients aged 65 – 74 and patients ≥75. The dotted lines indicate the trend in median OS over time. NR = median not reached
Figure S1B. Proportion of patients initiating trastuzumab for MBC in each year, stratified by age group.
Figure S1C. Proportion of patients initiating trastuzumab with a chemotherapy partner in each year of the study period.
Figure S1D. Kaplan-Meier survival probability plot for patients aged 65 – 74 and patients aged >75.
