Supplementary Panel 2. Open and Calm participants' changes in cortisol secretion dynamics

(a) Curve of Cortisol Secretion (AUCᵢ)  
Non-blunted OC participants

(b) Curve of Cortisol Secretion (AUCᵢ)  
Blunted OC participants

Notes: *p < .05 (two-tailed, intent-to-treat analyses).  
(a). Pre-post changes in the Cortisol Awakening Response (CAR) Area Under Curve - Increase (AUCᵢ) for non-blunted OC participants (n=15).  
(b). Pre-post changes in AUCᵢ for blunted OC participants (n=18).  
(c). Descriptive plot of baseline and post-test values for saliva samples 1-5 for non-blunted OC participants.  
(d). Descriptive plot of baseline and post-test values for saliva samples 1-5 for blunted OC participants. Error bars represent 95% CI of the mean. Supplementary Table 2 shows descriptive cortisol data and test statistics.
