Exclusions:
Chronic disease = 8
PA outliers = 2
hsCRP outliers = 6

Study population  
N=824

Figure S1. Study Participants

1Covariates: study, region, parental education, pubertal stage, fasted blood sampling, exact age at blood sampling, BMI, total daily energy intake. 2Chronic diseases: diabetes, coeliac disease, cancer, Chron’s disease; PA outliers: >200min/day; hsCRP outliers: >1mg/dl. SFA = saturated fatty acids; PA = Physical activity; hsCRP = high-sensitivity C-reactive protein
