Supplementary Figure 1

The graph illustrates the percentage of new asthma cases by age at diagnosis, distinguishing between allergic and non-allergic cases. The x-axis represents the age at asthma diagnosis, ranging from 0-9 to 60-69. The y-axis shows the percentage of new asthma cases, ranging from 0 to 100. The data shows a trend where the percentage of new asthma cases increases with age, particularly for non-allergic cases.
