Figure S1. NS1 level of AG129 mice infected with dengue virus (2×10^6 PFU) on day 4 of post infection detected by NS1 antigen immunoassay. The NS1 levels in plasma of mock infection (white bars), infected (black bars) and infected + FCPLJ (checkered bars) AG129 mice groups. The treated group was given 1000 mg/kg BW of FCPLJ. There was no significant difference between observed groups.
