This graph shows the comparison of CPM (counts per minute) across different conditions:

- **WT**
- **Lgr5/V2R**
- **NTR2-Dex**
- **NTR2-Neurotensin**

The x-axis represents different conditions, and the y-axis represents CPM. The graph indicates that NTR2-Neurotensin has a significantly higher CPM compared to the other conditions, marked with an asterisk. The sample size (N) is 3.
