Supplementary figure I. Cumulative frequency curves for diameter stenosis (DS, A), net luminal gain (B) and net luminal loss (C) at follow-up angiography in subjects with different tertiles of SD of HbA₁c.
Supplementary figure II. Cumulative frequency curves for diameter stenosis (DS, A), net luminal gain (B) and net luminal loss (C) at follow-up angiography in subjects with different tertiles of VIM of HbA1c.
Supplementary figure III. Comparison of different measures of intraindividual variability of HbA$_1$c between patients with and without ISR.
Supplementary figure IV. Subgroup analysis of diameter stenosis (DS) at follow-up angiography based on tertiles of SD of HbA1c. Data are expressed as mean ± confidence interval (CI). T1, the lowest tertile; T2, intermediate tertile; T3, the highest tertile. *P<0.05, **P<0.01 vs. the lowest tertile; #P<0.05 vs. intermediate tertile.
Supplementary figure V. Subgroup analysis of diameter stenosis (DS) at follow-up angiography based on tertiles of VIM of HbA1c. Data are expressed as mean ± confidence interval (CI). T1, the lowest tertile; T2, intermediate tertile; T3, the highest tertile. *P<0.05, **P<0.01 vs. the lowest tertile; #P<0.05 vs. intermediate tertile.
