Fig. S1. Side domains of the Hbp passenger domain. (A) Cartoon of the crystal structure of the passenger domain of the *E. coli* AT Hbp (1WXR[PDB]). The side domains d1 (red), d2 (green), d3 (yellow), d4 (magenta), d5 (orange), and the conserved autochaperone domain (ac; cyan) are highlighted. The remainder of the passenger, including the β-stem domain, is in dark blue. (B) Cartoon of the crystal structure as in A rotated around the y-axis (50°counter clockwise). The image was created using MacPyMol.
