Figure S3

Figure S3. Treatment of BKM120 and TH588 caused elevation of γ-H2AX-positive cells.
Left: Flow cytometry analysis of γ-H2AX stained LN229 GBM cells following treatment of vehicle (DMSO), BKM120, TH588 and combination of both for 24 h. Right: Quantification of γ-H2AX-positive LN229 cells of each type of treatment in triplicates.
