Supplementary figure 1: Correlation between CSF YKL-40 and age.

CSF YKL-40 (ng/ml) is correlated to age in healthy controls (A) and all groups combined (B). In simple linear regression CSF YKL-40 show a strong correlation with age among healthy controls (R² = .403, F(1,34)=22.955, p<.001) and the combined cohort consisting of healthy controls, SCD, MCI and AD dementia (R² = .272, F(1,119)=44.527, p<.001), visualized here as a scatter plot.
