Supplementary Figure 5. Identification of CRISPR/Cas9-induced myb86 mutants in tobacco by MSBSP-PCR. A, the first PCR with MYB86-F+MYB86-R as primers and DNA of 24 T₀ plants as template. Equal amount of each DNA of 24 T₀ plants (40 ng) was added in each PCR system. B, the second PCR with MYB86-T+MYB86-R as primers and the products of the first PCR were added as templates. At least three independent biological replications were amplified to each PCR.
