STAGE I: FORMATIVE RESEARCH (Social Network Analysis)
Establish a baseline to evaluate changes in knowledge on and attitudes about recovery-oriented practices and map the flow of information within the institution to optimize Stage II

STAGE II: PARTICIPATORY RESEARCH
Service-users and providers will create and implement educational workshops and other actions for recovery-oriented services based on their experiential knowledge.

STAGE III: PROCESS EVALUATION
To conduct a focused ethnography to understand the contextual factors and changes in:
- Values and practices within the participatory research group and provider network in the organization,
- Knowledge of and attitudes about recovery
- Provider networks within the institution and patient network in the community
