Figure A: Immunofluorescence images showing DAPI, NPM1, PR, and Overlay channels.

Figure B: Bar graph showing mean fluorescence PR (normalized to control) for siRNA CTL and siRNA NPM1. * indicates statistical significance.

Figure C: Graph showing relative fold-change of NPM1 mRNA (normalized to control siRNA). **** indicates statistical significance.

Figure D: Graph showing PR intensity (normalized to GAPDH) for NPM1.WT+PR and NPM1.DNLS+PR. * indicates statistical significance.
