Hung et al. Figure S5

(a) A table showing interactions and SUMOylation statuses for different regions of Slug. The table includes columns for PIASy, Ubc9, interaction, and SUMOylation. The interactions are marked with plus signs, and the SUMOylation statuses range from negative (ND) to positive (++).

(b) A diagram depicting interactions and interacting regions of Slug and Ubc9. The diagram includes colors and labels indicating various interaction regions, such as Slug-interacting region, Ubc9-interacting region, and PIASy-interacting region. An arrow indicates a 180° rotation.
