A) patellofemoral pain

- Greater pronation velocity (left foot);
- Less pronation velocity (right foot)

B) non-specific injuries

- Greater maximal abduction velocity
- Greater maximal eversion position; maximal eversion excursion; mean eversion velocity; time to max eversion; max eversion velocity; 3-D pronation excursion
- Greater max re-inversion velocity; mean re-inversion velocity

Displacement/excursion
Time to maximal excursion
