Additional File 1: EQ-5D assessments over time
Percentages of patients with some or severe problems per dimension

A: 47 1-year AKI-RRT patients

- Mobility: 70% (P=0.045)
- Self-care: 60% (P<0.001)
- Usual activities: 70% (P=0.013)
- Pain/discomfort: 60% (P=0.009)
- Anxiety/depression: 50%

B: 94 1-year non AKI-RRT patients

- Mobility: 50% (P=0.021)
- Self-care: 40% (P=0.050)
- Usual activities: 50% (P<0.001)
- Pain/discomfort: 40% (P=0.035)
- Anxiety/depression: 30%

C: 28 4-years AKI-RRT patients

- Mobility: 50% (P=0.040)
- Self-care: 40% (P<0.001)
- Usual activities: 50% (P=0.040)
- Pain/discomfort: 40%
- Anxiety/depression: 30%

D: 28 4-years non AKI-RRT patients

- Mobility: 40% (P=0.017)
- Self-care: 30% (P=0.014)
- Usual activities: 40%
- Pain/discomfort: 30%
- Anxiety/depression: 20%
The X-axis represents the different dimensions of the EQ-5D.

The Y-axis represents the percentages (%) of patients with some or severe problems in a respective dimension.

Only significant P-values (Chi Square test) are shown above the respective dimensions.

**Abbreviations:** QOL= quality of life; AKI= acute kidney injury; RRT= renal replacement therapy
