Survival probability over time for different PTSD caseness categories. The x-axis represents time in months, ranging from 3 to 24, and the y-axis represents survival probability, ranging from 0.70 to 1.00. The log-rank test was used to compare survival rates between the two groups, with a p-value of 0.12. The number of patients at risk for each follow-up time point is also shown, with separate lines for PCL-C < 45 and PCL-C ≥ 45.
