The figure shows the relative contractile response (%) over time for patients treated in the ICU, categorized as responders and non-responders. The cut-off for an adequate contractile response is indicated by the dotted line. The sample sizes for each treatment day are provided:

- Day 1: n = 168
- Day 2: n = 146
- Day 3: n = 156
- Day 4: n = 174
- Day 5: n = 184
- Day 6: n = 160
- Day 7: n = 134

The graph indicates a variation in contractile response across different treatment days, with a notable decrease in contractile response for non-responders compared to responders.
