A: Western blot analysis showing GR, ER-α, and β-actin expressions in T47D and T47D-Y cells.

B: Graph showing total live cells (counts/minute) over days of treatment for T47D-Y cells. Treatments include Veh, E2, Dex/E2, 297/E2, 335/E2.

C: Graph showing tritiated 17-β estradiol counts/minute at different ligand concentrations (nM). Treatments include E2, Dex, 134, and 335.
