Copy number variation analysis of the \textit{TERT} gene in the CRISPR-edited clones.

Copy number of the \textit{TERT} gene in (A) HEK 293 clones with FLAG-SNAP-TERT, (B) HEK 293T clones with modified \textit{TERT} promoter, and (C) SCaBER clones with modified \textit{TERT} promoter were performed as described in Materials and Methods with the \textit{GAPDH} gene or the \textit{TBP} gene as internal control. In (B), Clone 1 and 2 have lost a copy of the \textit{TERT} gene. Clone 3 and 4 correspond to the clones analysed in Fig S6F.
