Figure S9. Gene co-expression analysis of cell type-specific IncRNAs in single cells

A) Matrix of Pearson correlation coefficients between cell type-specific IncRNAs and the top 10% most correlated or anticorrelated mRNAs across single cells. B) Gene ontology terms for gene clusters identified in the correlation matrix. Cluster nodes are labeled with red circles. Header bar colors for IncRNAs: red, endothelial. blue, radial glia. green, dividing radial glia. purple, intermediate progenitor cell. orange, newborn neurons. yellow, maturing neurons. brown, interneurons.
