Figure S4

A

A graph showing the distribution of relative binding across different arrays. The x-axis represents Array 1, and the y-axis represents Array 2. Two types of peptides are highlighted: all peptides and Histone H4 (1-23) peptides.

B

A scatter plot comparing the relative binding of all peptides and Histone H4 (1-23) peptides across two arrays. The plot indicates the distribution and variation in binding across different samples.

C

A bar chart showing the relative binding of different peptides. The chart includes bars for H4(1-23), H4S1P (1-23), H4K5, 8, 12, 16ac, and H4(1-20), with error bars indicating the variability in binding.
