Figure a) shows box plots for log10 Read Count across different samples labeled 'sha', 'eve', 'sobs', and 'chao1', with p-values and R-squared values provided for each. Figure b) displays the motus Rarefaction curve across different sequences per pool, with observed motus values plotted against sequences per pool. Figure c) illustrates the Taxa Accumulation Curve, showing the number of taxa accumulated against accumulated samples. Figure d) presents scatter plots for 'eve' and 'sha', with fitted lines and R-squared values indicated.
