Figure S1. Kinetics of mRNA regulation by ITF2357. RA FLS were either left untreated or were treated with ITF2357 prior to incubation with IL-1\(\beta\) for the indicated time. Temporal changes in mRNA accumulation of IL-1\(\beta\)-inducible genes were monitored using a customized qPCR array. Data are presented as Z-scores of mean (n=3) fold changes relative to unstimulated cells and hierarchically clustered with the average linkage method.
