Fig. S1 Correlation of biomarkers and modified SLEDAI in SLE patients (N=124).
Pearson correlation coefficient (R) of C3 (A), C4 (B), anti-dsDNA (C), IFN-α (D), MCP-1 (E), IL-6 (F), IL-8 (G), and IL-18 (H) and modified SLEDAI scores were showed. The grey area is 95% confidence interval; p<0.05, **p<0.01, and ***p<0.001 (Bonferroni correction).
