Supplementary Figure S1. SL-diet-induced early mortality in db/db mice and DPP-4 inhibition reduced lethality.

Survival rates of indicated mice in three independent cohort studies. (a) n = 12, (b) n = 8, (c) n = 7.

The db/+ and db/db mice were fed the SL diet, SO diet, SL + DPP-4 inhibitor diet, or SO + DPP-4 inhibitor diet, as described in Fig. 2.
