Figure S3. Calinski-Harabasz indexes (CH) for number of potential clusters of samples at weaning, week 15, and off-test, using unrarefied microbiome data. Highest CH value at each time point indicates optimal number of clusters/enterotypes. Samples at weaning formed 2 clusters, A and B. Samples at week 15 formed 2 clusters, C and D. Samples at off-test formed 2 clusters, E and F.
