Supplementary Figure 9.

(a) FACS analysis showing the depletion of CD11b, CD4, and CD8a cells with iso- and anti-CD11b antibodies. The graphs show the percentage distribution of cells before (Depletion control) and after depletion (After depletion).

(b) Bar graphs illustrating the percentage of CD11b⁺, CD4⁺, and CD8a⁺ cells with isotype and anti-CD11b, CD4, and CD8a antibodies. The bars are labeled with statistical significance (****).
