Figure S4

(a) Kaplan-Meier survival analysis showing percent survival over days post injection. The p-value for the comparison between Pax3 (n=5) and PDGF (n=12) is 0.5.

(b) Bar graph showing the distribution of tumor grades in mice injected with different combinations of factors. The legend indicates the presence (+) or absence (-) of RCAS-Y, Pax3, and PDGF-B in the groups. No Tumor, Grade IV, Grade III, and Grade II are represented by different colors.
