Additional file
Downcore evolution of the hysteresis properties of samples from Hole C0008A
Selected examples of slope-corrected hysteresis loops. On insert for Spl.13H-2-60-62, is shown the non-corrected hysteresis loop. All the hysteresis loops shown here correspond to samples presented in the main manuscript. The diagram $M_n/M_i$ vs. $B_c$ is also shown: except for $B_c >45$ mT, there is a linear relation between $M_n/M_i$ and $B_c$.
