Pathways

1. Replicative immortality
2. Reprogramming energy metabolism
3. Genome instability
4. Tumor-promoting inflammation
5. Sustained angiogenesis
6. Evading growth suppressors
7. Evading immune destruction
8. Sustaining proliferative signaling
9. Resisting cell death
10. Tissue invasion and metastasis
11. Other

Number of hallmarks per pathway:
- Replicative immortality: 1
- Reprogramming energy metabolism: 2
- Genome instability: 7
- Tumor-promoting inflammation: 9
- Sustained angiogenesis: 12
- Evading growth suppressors: 13
- Evading immune destruction: 19
- Sustaining proliferative signaling: 50
- Resisting cell death: 57
- Tissue invasion and metastasis: 82
- Other: 142
