Supplementary figure 1. Effect of FaDu CM on MSC cell growth and cell cycle. (a) MSCs were cultured in normal DMEM or in FaDu CM and on day 4, cell viability was measured using MTT assay. Data are presented as mean ± S.D., n=5. (b) MSCs were cultured as in (a), then cell cycle analysis was done on control MSCs or MSCs cultured in FaDu CM on day 5. Data are presented as mean ± S.D., n=3.
